

Amazon Sales Performance Analysis

Order-level e-commerce activity across five countries, 2020 to 2024

Rs. 84.23M Net Revenue	Rs. 84.23M Total Profit	1,00,570 Total Orders	43,000 Total Customers
----------------------------------	-----------------------------------	---------------------------------	----------------------------------

Data and Approach

The data comes from one table called Amazon. It was loaded into Power BI and a data type was set for every column. Each row is one line-item order placed between 2020 and 2024, across five countries. DAX measures were then added and the report was made on three pages (dashboards).

Period	2020 to 2024 (five years)
Size	About 1,00,570 orders and 43,000 customers
Places	5 countries: United States, India, Canada, United Kingdom, Australia
Products	10 brands, 6 categories (Books, Clothing, Electronics, Home & Kitchen, Sports & Outdoors, Toys & Games)
Selling	6 payment methods (Credit Card, Debit Card, UPI, Amazon Pay, Net Banking, Cash on Delivery), order status field
Money columns	Quantity, unit price, discount, tax, shipping cost, total amount

A part of the data as seen in Power BI

The report has three dashboards

Dashboard 1 - Brand & Revenue Overview: net revenue by brand, quantity sold by product and country, revenue drill-through, shipping cost by country, and profit by brand and category.

Dashboard 2 - Executive Summary: the main numbers, profit share by brand and category, what drives profit, brand market share, and orders by year.

Dashboard 3 - Customer & Operations: payment method, customers by country, tax paid by brand, revenue by brand and product, and tax by category.

Objectives of the Analysis

The analysis has three objectives. Each one is answered by one dashboard, and the charts follow the same order.

Objective 1: Get an overview of brand and revenue performance

See how net revenue, quantity sold and profit break down by brand, product, country and category, and check how even shipping cost is across countries. This is answered by Dashboard 1.

Objective 2: Review overall business performance

Look at the main numbers - revenue, profit, average order value, tax and customers - and find out which brands lead and what drives profit up or down. This is answered by Dashboard 2.

Objective 3: Understand customers and operating costs

Find out where customers are, how they prefer to pay, and how revenue and tax differ by brand, product and category. This is answered by Dashboard 3.

DAX Formulas Used

Eight DAX measures were created on the Amazon table. The formulas are shown as they were written in Power BI. Measures that divide use DIVIDE() with 0 as the alternate result, so there is no error when the bottom number is zero.

Measure 1: Net Revenue

```
Net Revenue =  
SUM(Amazon[TotalAmount])  
- SUM(Amazon[Tax])  
- SUM(Amazon[Discount])  
- SUM(Amazon[ShippingCost])
```

Takes the order total and removes tax, discount and shipping cost. Used in the Net Revenue card.

Measure 2: Profit Margin %

```
Profit Margin % =  
DIVIDE(  
    [Total Profit],  
    [Net Revenue],  
    0  
)
```

Profit as a share of net revenue. Used to compare brands and categories.

Measure 3: Brand Rank

```
Brand Rank =  
RANKX(  
    ALL(Amazon[Brand]),  
    [Total Revenue]  
)
```

Ranks each brand by total revenue, highest to lowest. Used behind the brand charts.

Measure 4: Top Brand Market Share

```
Top Brand Market Share =  
MAXX(  
    VALUES(Amazon[Brand]),  
    [Brand Market Share]  
)
```

Finds the highest market share among the brands shown. Used in the Brand Market Share chart.

Measure 5: Total Customers

```
Total Customers =  
DISTINCTCOUNT(Amazon[CustomerID])
```

Counts the different customers. Used in the Total Customers card and the country chart.

Measure 6: Total Orders

```
Total Orders =  
DISTINCTCOUNT('Amazon'[OrderID])
```

Counts the different orders. Used in Average Order Value and the orders-by-year chart.

Measure 7: Total Tax Paid

```
Total Tax Paid =  
SUM(Amazon[Tax])
```

Adds up all the tax collected. Used in the Total Tax Paid card.

Measure 8: Average Order Value

```
Average Order Value =  
DIVIDE(  
    [Total Revenue],  
    [Total Orders]  
)
```

Total revenue divided by the number of orders. Used in the Average Order Value card.

Other measures and calculations used in the visuals

Three formulas above build on other measures already in the data model: **Total Revenue** (sums TotalAmount, used in Brand Rank, Average Order Value and the revenue charts), **Total Profit** (used in Profit Margin %, the profit waterfall and the Total Profit card) and **Brand Market Share** (each brand's share of total revenue, used in the Brand Market Share chart). A few visuals also use Power BI's Sum or Average directly on a column instead of a named measure: Sum of Quantity (the country-by-product chart), Sum of TotalAmount (the brand table and the sales-per-year chart), Average of ShippingCost (the shipping chart), and Average of UnitPrice and Average of Tax (the tax chart).

Dashboard 1: Brand & Revenue Overview

Objective 1.

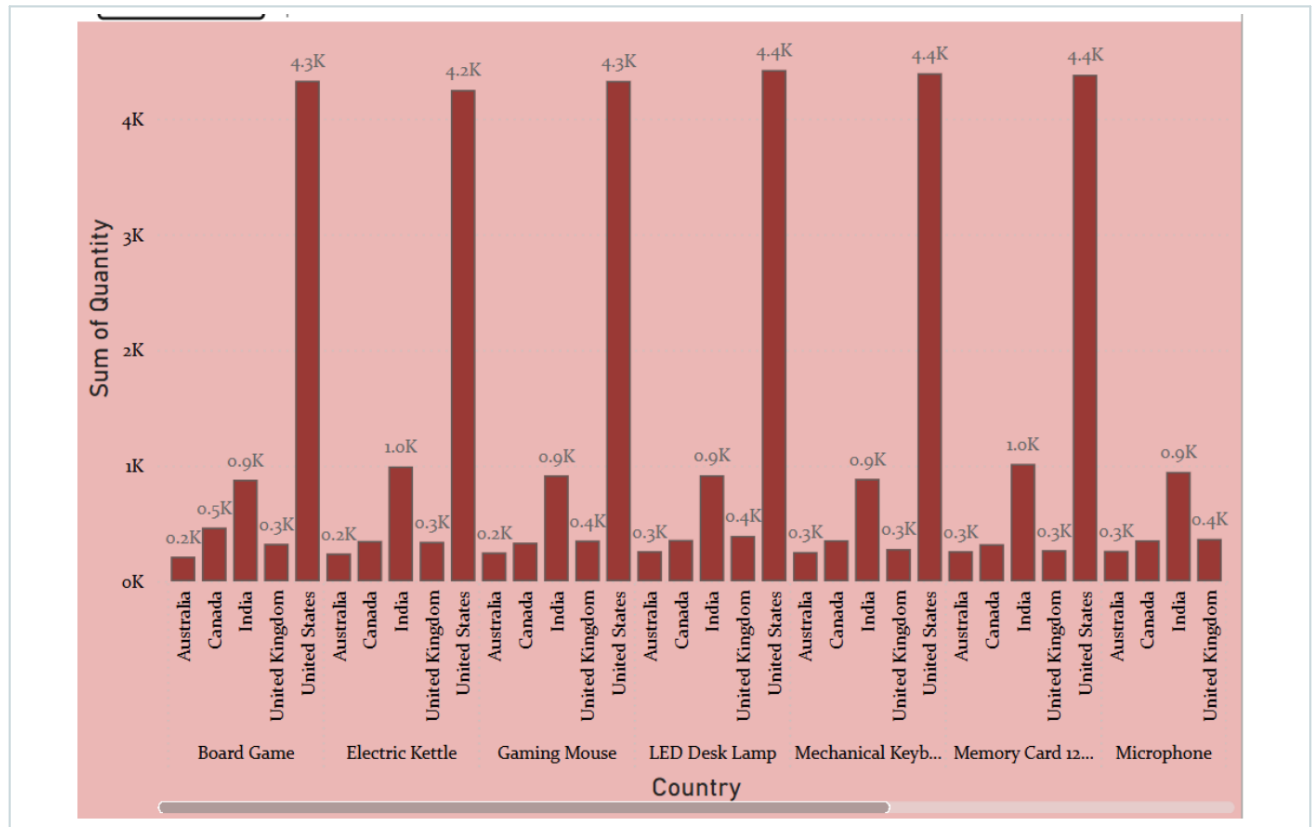

The first page gives a brand-level view. The top row shows net revenue by brand, quantity sold by product and country, and a drill-through of revenue by country, brand and product. The bottom row shows the average of total sales by brand, average shipping cost by country, and total profit by brand and category.

Chart	Visual	Question it answers
1.1	Total Quantity Sold of Each Product, by Country	Which country sells the most of each product?
1.2	Revenue Drill-Through: Country, Brand, Product	Where does revenue come from, by country, brand and product?
1.3	Average Shipping Cost by Country	Is shipping cost the same everywhere?
1.4	Total Profit by Brand and Category	How does each brand's profit build up by category?
1.5	Share of Total Sales by Brand	Is one brand bigger than the rest?

Chart 1.1 Total Quantity Sold of Each Product, by Country

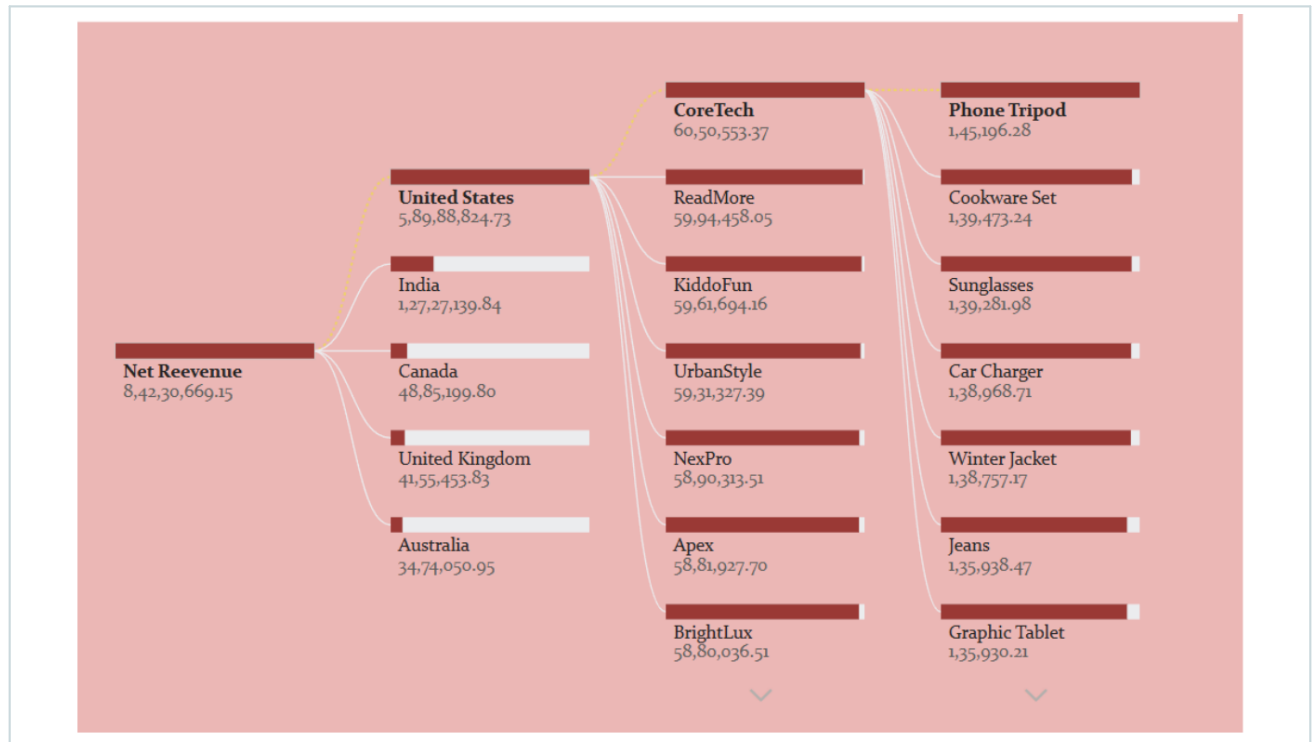

Chart type: Clustered column chart. Fields: Country, ProductName, Sum of Quantity

The United States sells far more of every product than the other four countries, at about 4.2K to 4.4K units each. India, Canada, the United Kingdom and Australia each sell only 0.2K to 1.0K units of the same products.

Chart 1.2 Revenue Drill-Through: Country, Brand, Product

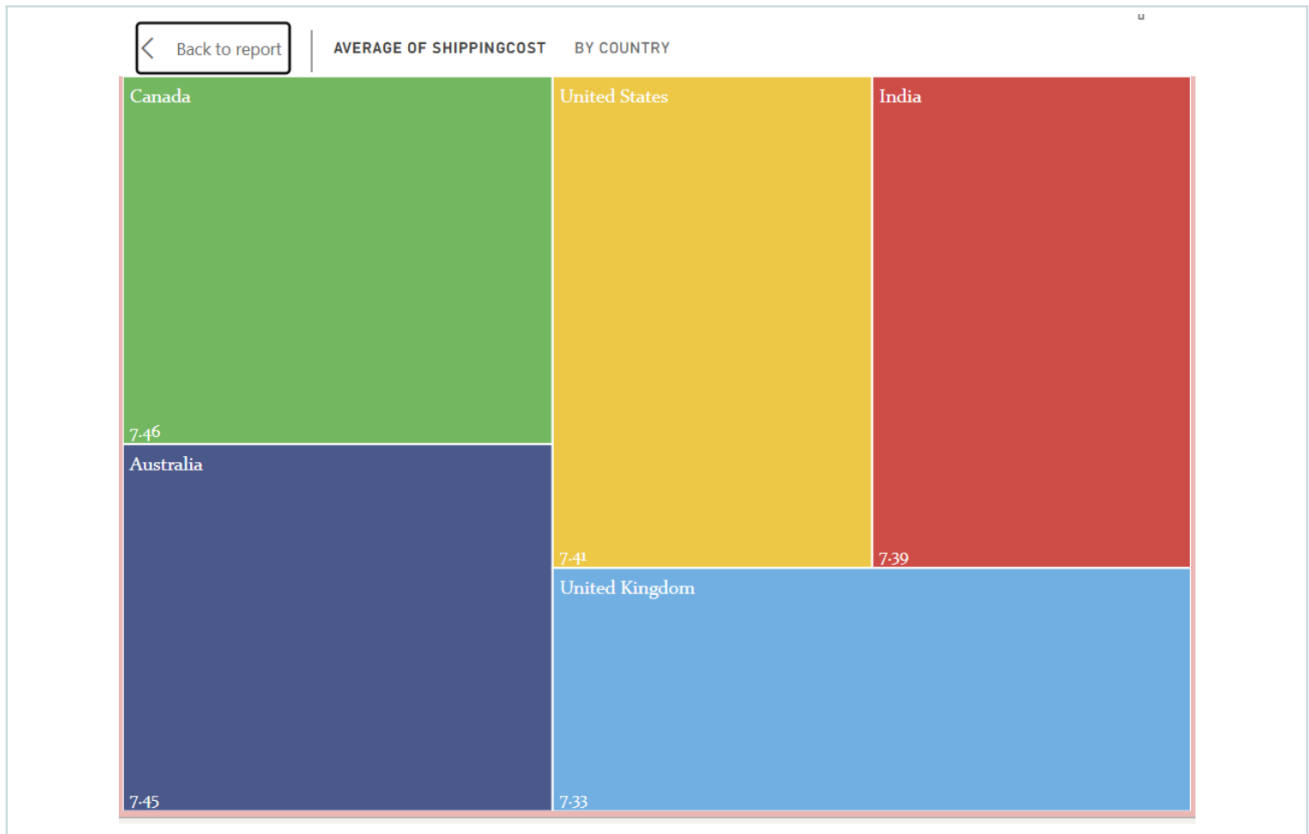

Chart type: Decomposition tree. Analyze: Net Revenue. Explain by: Country, Brand, Product

Net revenue of Rs. 8,42,30,669 flows mostly through the United States, then India, Canada, the United Kingdom and Australia. Inside the United States, CoreTech is the leading brand and Phone Tripod its top product.

Chart 1.3 Average Shipping Cost by Country

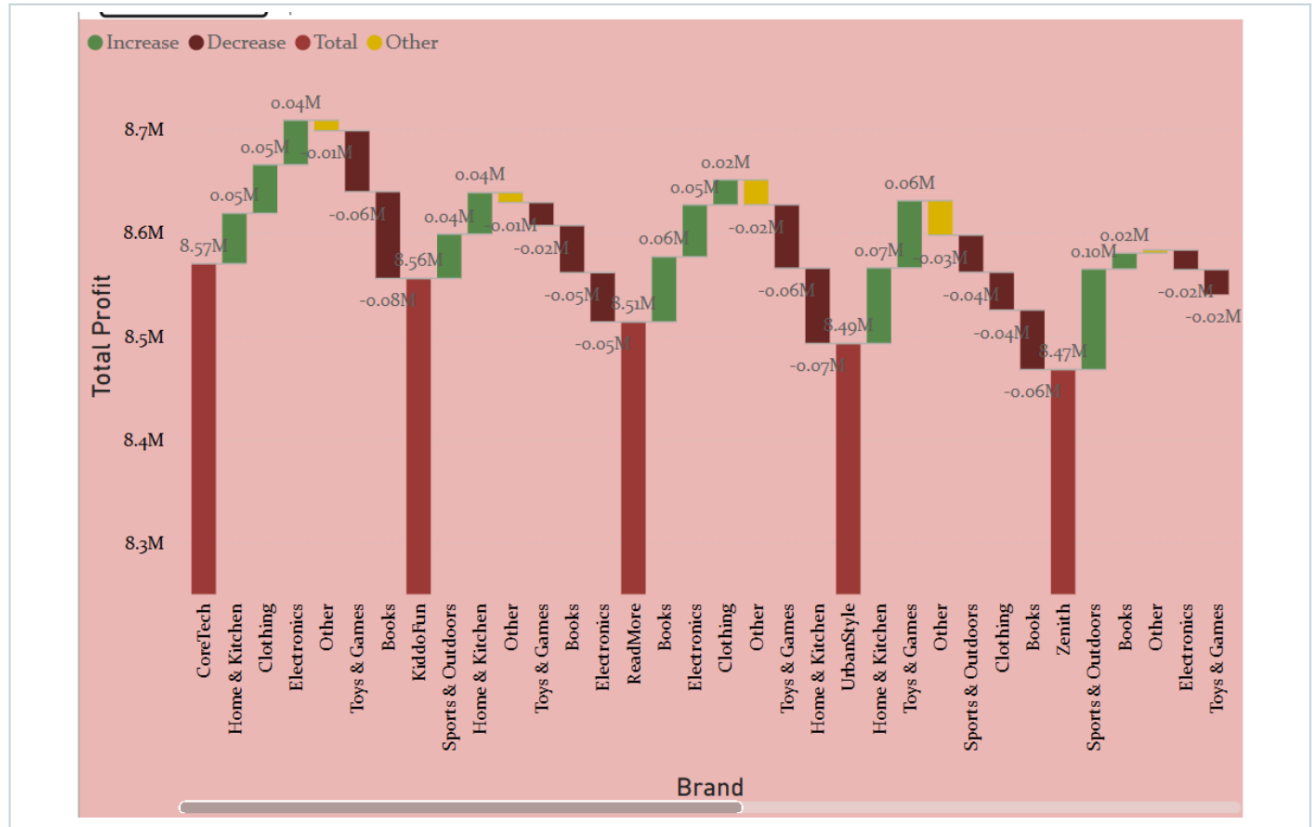

Chart type: Treemap. Fields: Country, Average of ShippingCost

Shipping cost is close to the same in every country, from Rs. 7.33 to Rs. 7.46 on average across Canada, the United States, India, Australia and the United Kingdom. This shows one consistent shipping cost, not five different ones.

Chart 1.4 Total Profit by Brand and Category

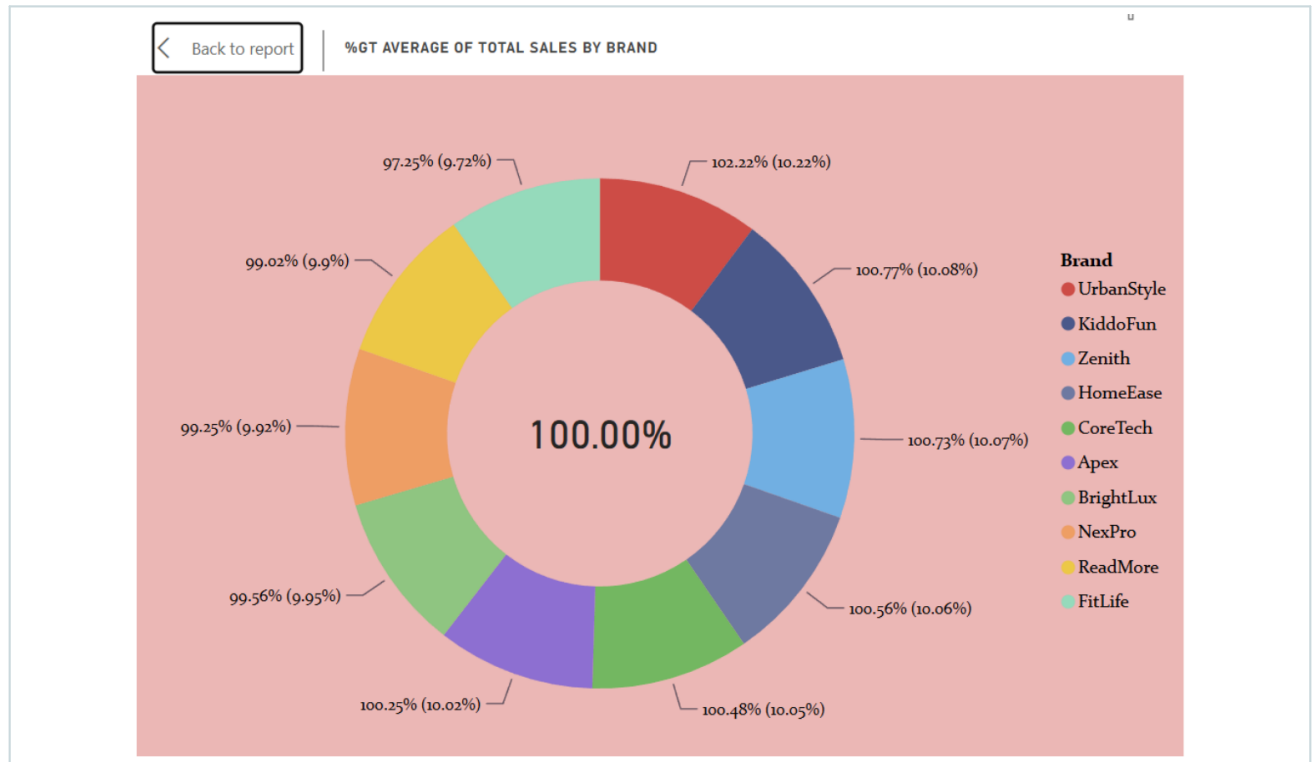

Chart type: Waterfall chart. Fields: Brand, Category, Total Profit

This chart shows how each brand's profit builds up from its categories. Home & Kitchen and Electronics add profit for most brands, which keeps every brand's total close to the others.

Chart 1.5 Share of Total Sales by Brand

Chart type: Donut chart. Fields: Brand, %GT Average of Total Sales

All ten brands hold close to the same share of total sales, each between about 9.7% and 10.2%. No single brand is far ahead, which points to a deliberately balanced set of brands.

Dashboard 2: Executive Summary

Objective 2.

The second page gives the main numbers. Five cards show net revenue, total profit, average order value, tax paid and total customers. Below them are the profit share by brand and category, what drives total profit, brand market share, revenue and average order value by brand, and total orders by year.

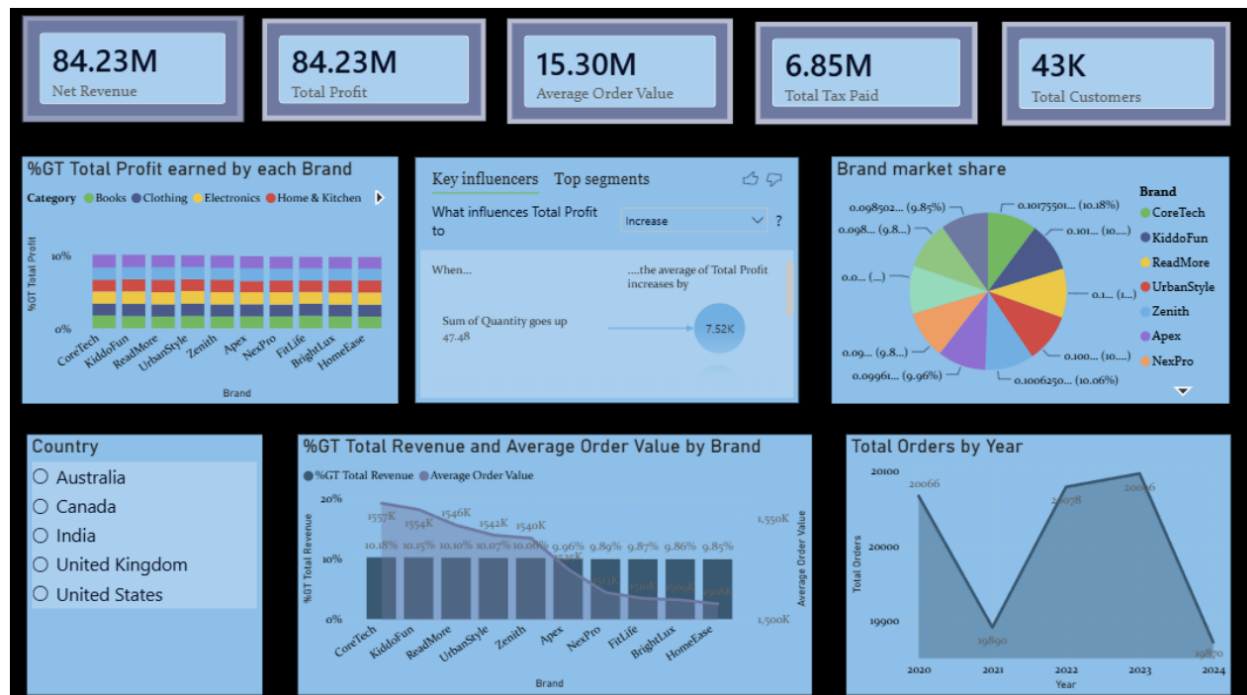

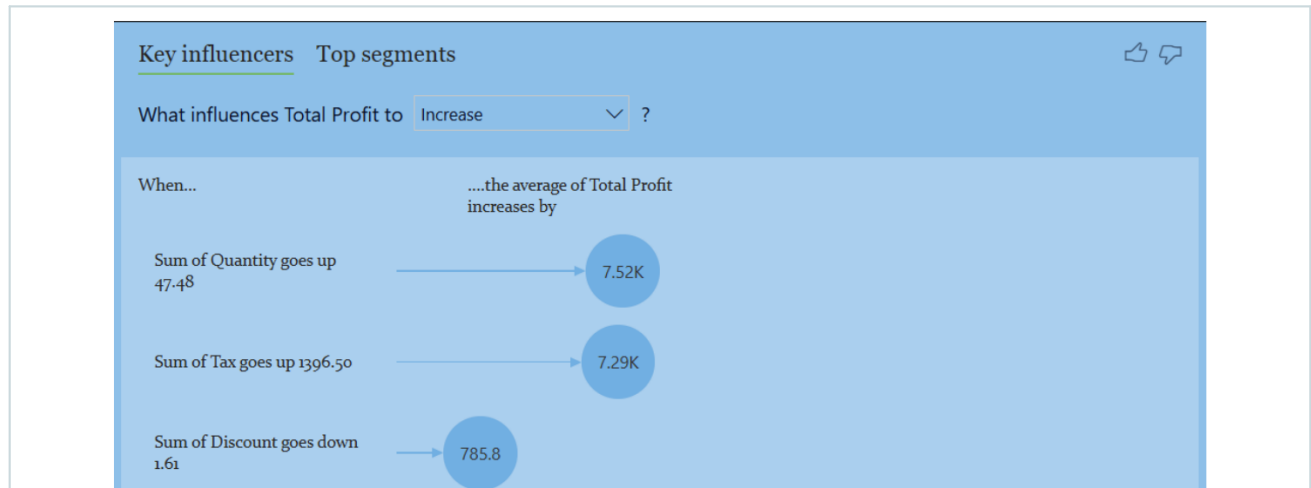

Chart	Visual	Question it answers
2.1	Key Influencers of Total Profit	What pushes total profit up or down?
2.2	Total Profit Earned by Each Brand, by Category	Does any brand rely on one category?
2.3	Total Revenue and Average Order Value by Brand	Which brands earn the most per order?
2.4	Total Orders by Year	How did order volume change by year?
2.5	Brand Market Share	How is the market shared between brands?

Chart 2.1 Key Influencers of Total Profit

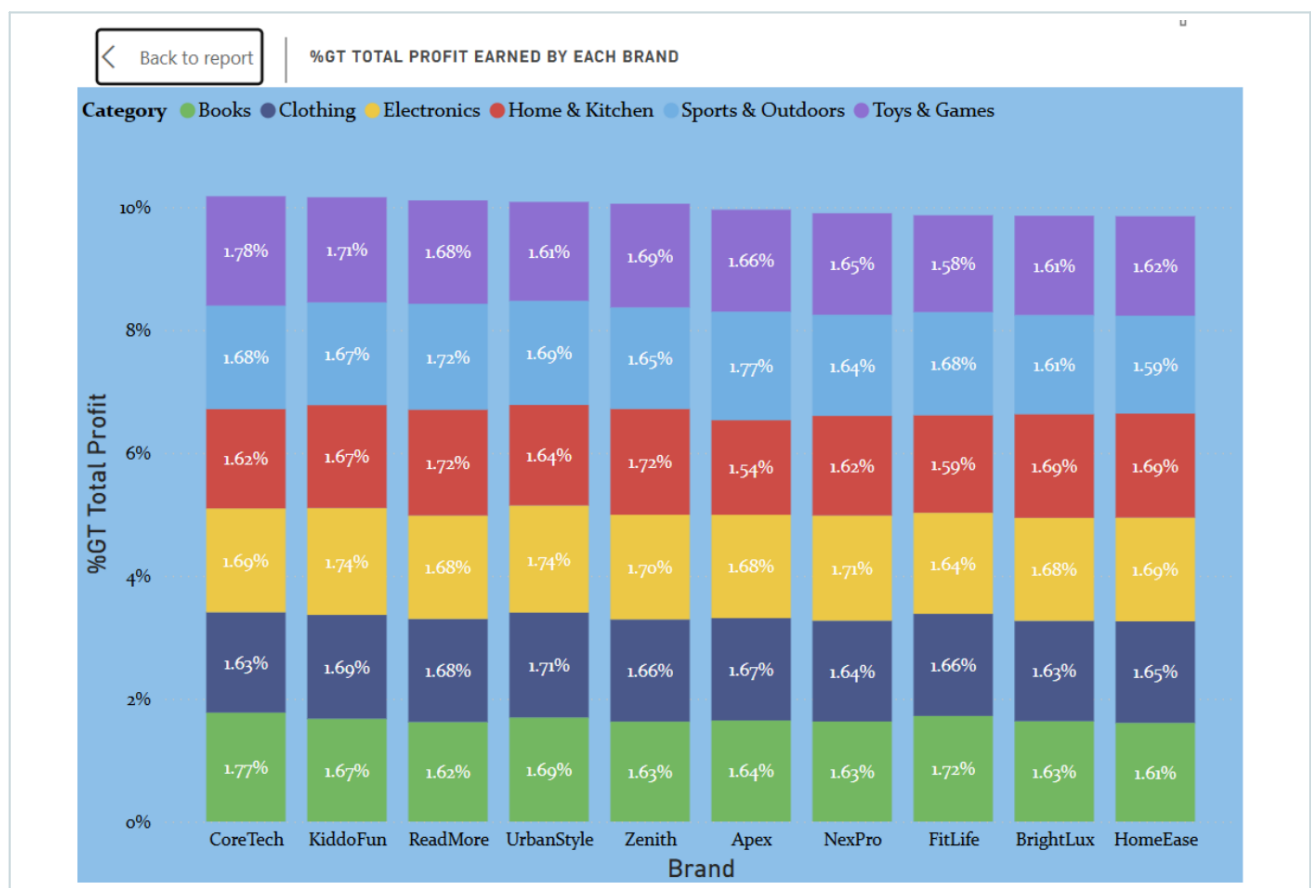

Chart type: Key influencers. Target: Total Profit

An increase in quantity sold raises average total profit by 7.52K, which is the strongest driver. An increase in tax adds 7.29K, and a decrease in discount adds only 785.8. Quantity sold matters most.

Chart 2.2 Total Profit Earned by Each Brand, by Category

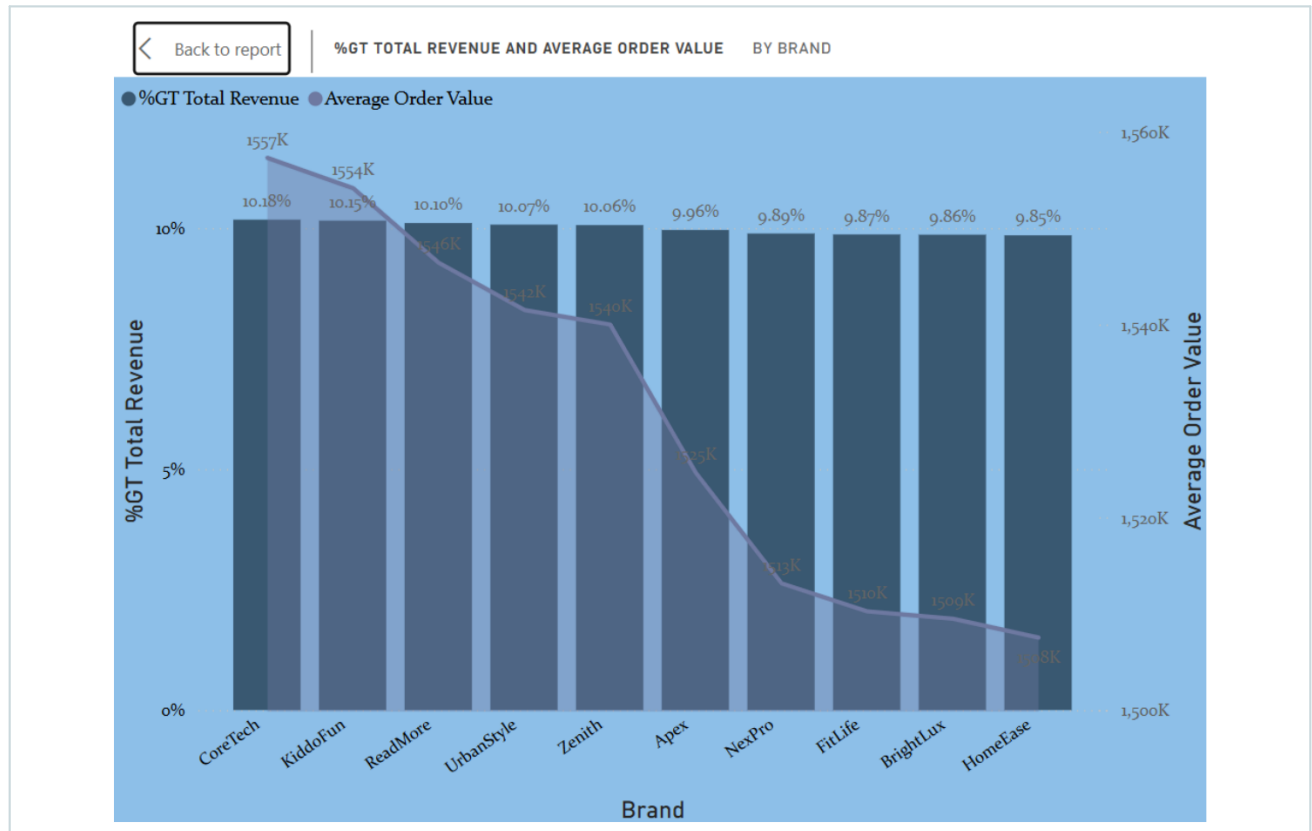

Chart type: 100% stacked column chart. Fields: Brand, Category, %GT Total Profit

Each brand's profit splits across the six categories in almost the same way. No brand depends heavily on one category, so the mix of categories is consistent across the whole portfolio.

Chart 2.3 Total Revenue and Average Order Value by Brand

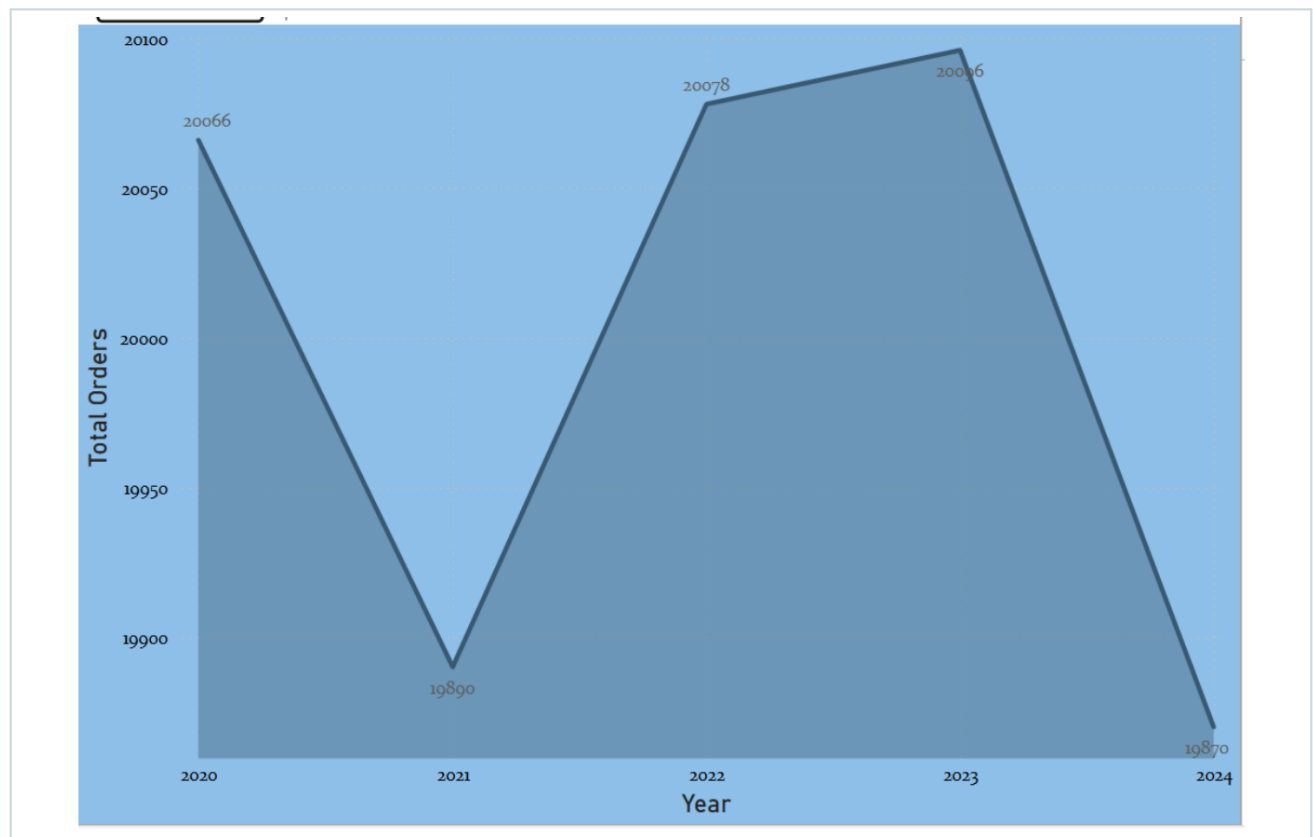

Chart type: Column and line chart. Fields: Brand, %GT Total Revenue, Average Order Value

CoreTech and KiddoFun lead on both revenue share (about 10.2% and 10.15%) and average order value (about 1,557K and 1,554K). Both numbers fall gradually down to HomeEase at the bottom of the list.

Chart 2.4 Total Orders by Year

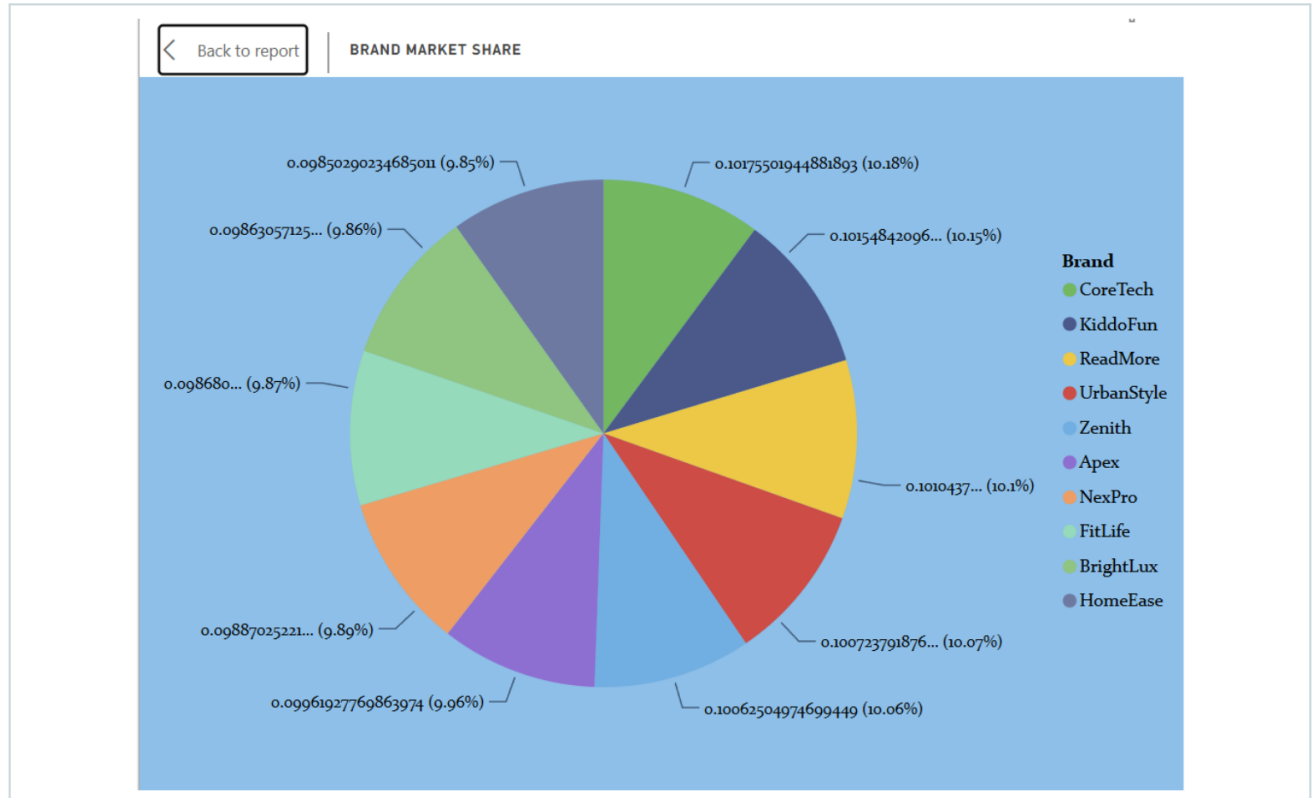

Chart type: Area chart. Fields: Year, Total Orders

Orders dipped in 2021 to 19,890, then recovered to about 20,080 in 2022 and 2023, before falling again to 19,870 in 2024. Order volume moves in a cycle rather than a steady trend.

Chart 2.5 Brand Market Share

Chart type: Pie chart. Fields: Brand, Top Brand Market Share

Market share is split almost evenly across the ten brands, from 9.72% (FitLife) to 10.18% (CoreTech). This confirms the same balanced pattern seen in the sales-share chart on Dashboard 1.

Dashboard 3: Customer & Operations

Objective 3.

The third page looks at customers and costs. It shows net revenue by brand, revenue by brand across top products, total sales by year, the most used payment method, tax paid by brand, customers by country, and tax against unit price by category.

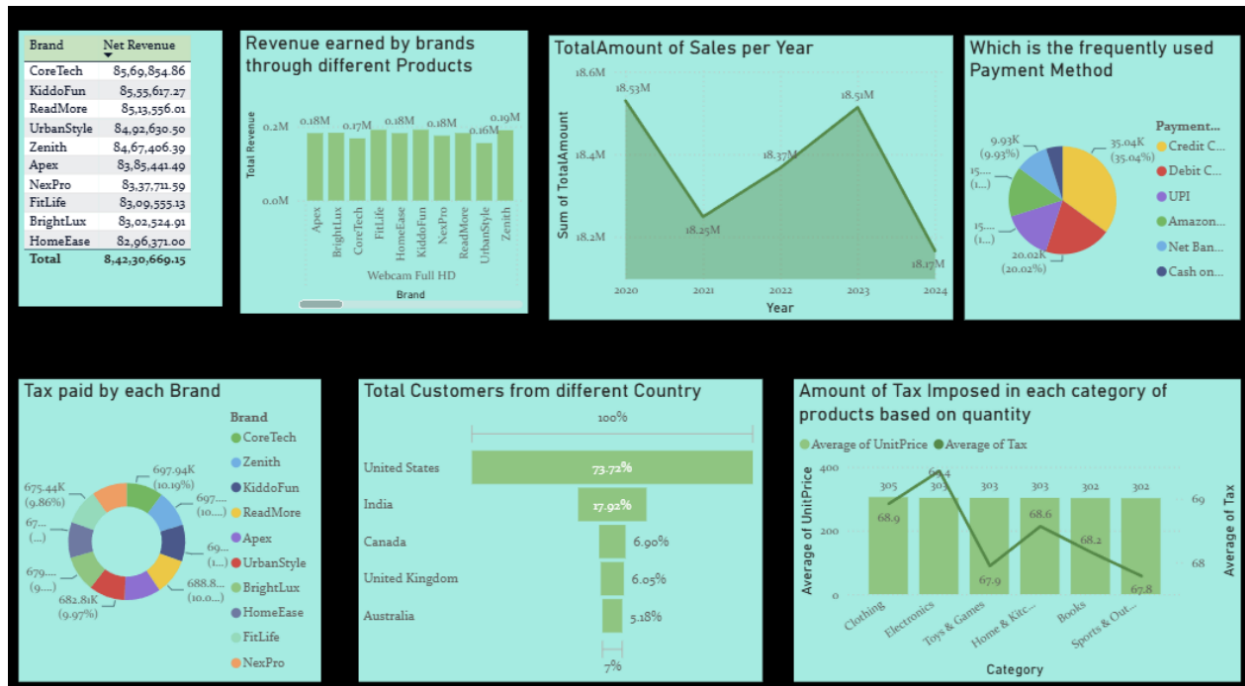

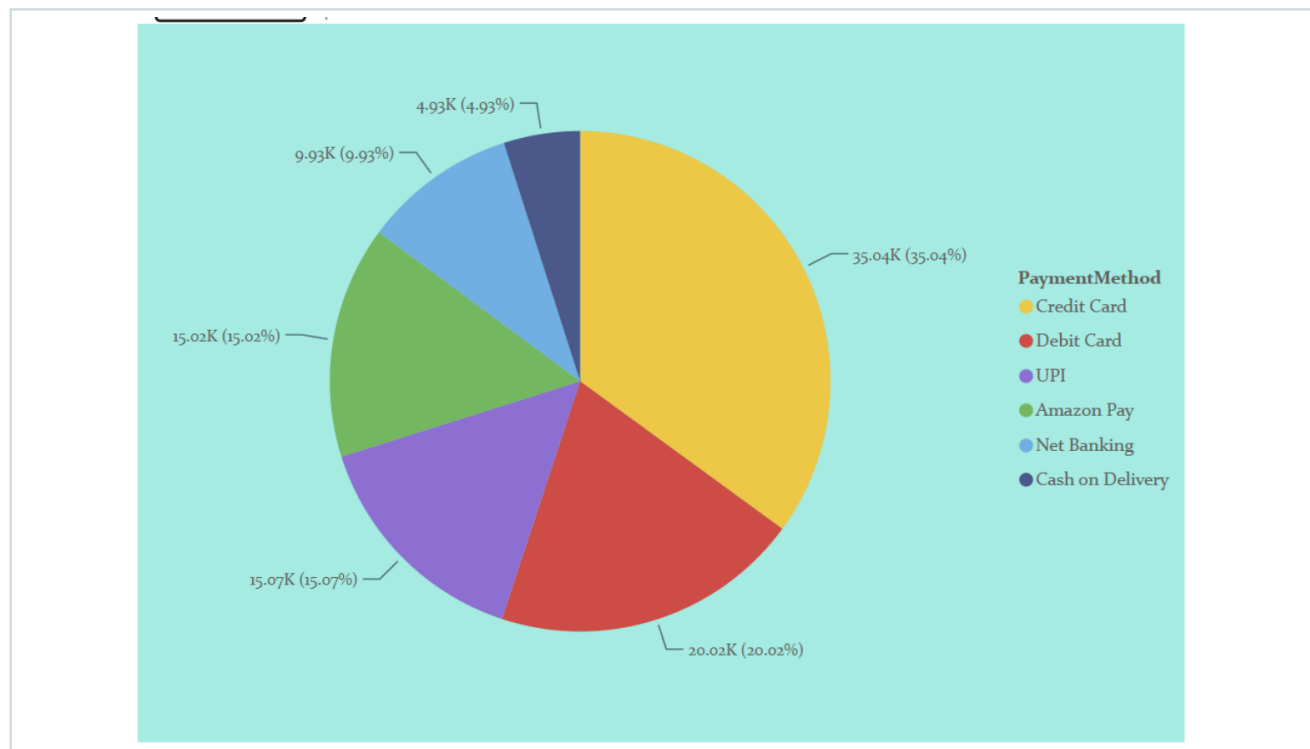

Chart	Visual	Question it answers
3.1	Frequently Used Payment Method	How do customers prefer to pay?
3.2	Total Customers by Country	Where are the customers?
3.3	Revenue Earned by Brands Through Different Products	Which brands earn the most from the top products?
3.4	Tax Imposed by Product Category, vs. Average Unit Price	How does tax compare with unit price by category?

Chart 3.1 Frequently Used Payment Method

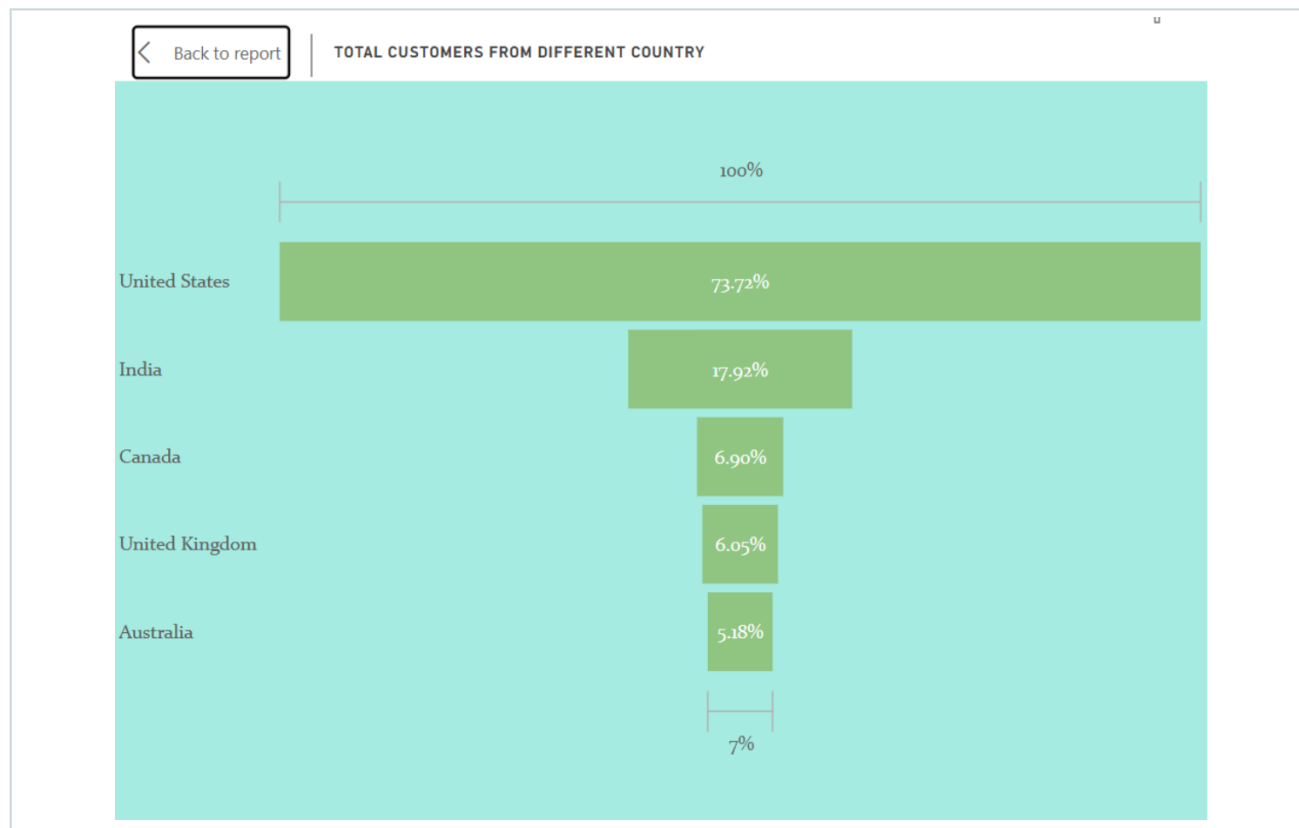

Chart type: Pie chart. Fields: PaymentMethod, Count of Orders

Credit card is the most used payment method at 35.04%, then debit card (20.02%), UPI (15.07%), Amazon Pay (15.02%), net banking (9.93%) and cash on delivery (4.93%).

Chart 3.2 Total Customers by Country

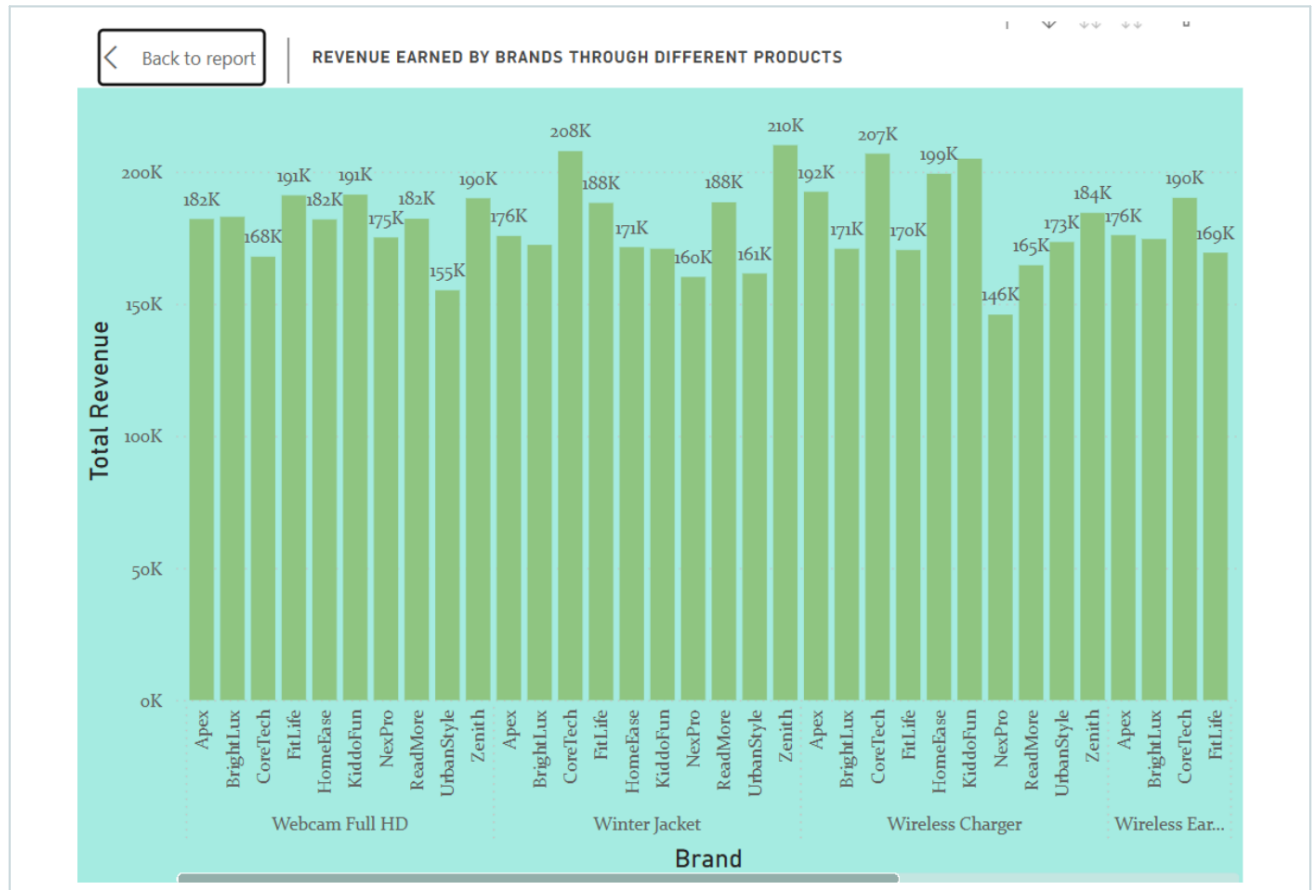

Chart type: Funnel chart. Fields: Country, Total Customers

The United States holds 73.72% of all customers, far ahead of India (17.92%). Canada (6.90%), the United Kingdom (6.05%) and Australia (5.18%) make up the rest.

Chart 3.3 Revenue Earned by Brands Through Different Products

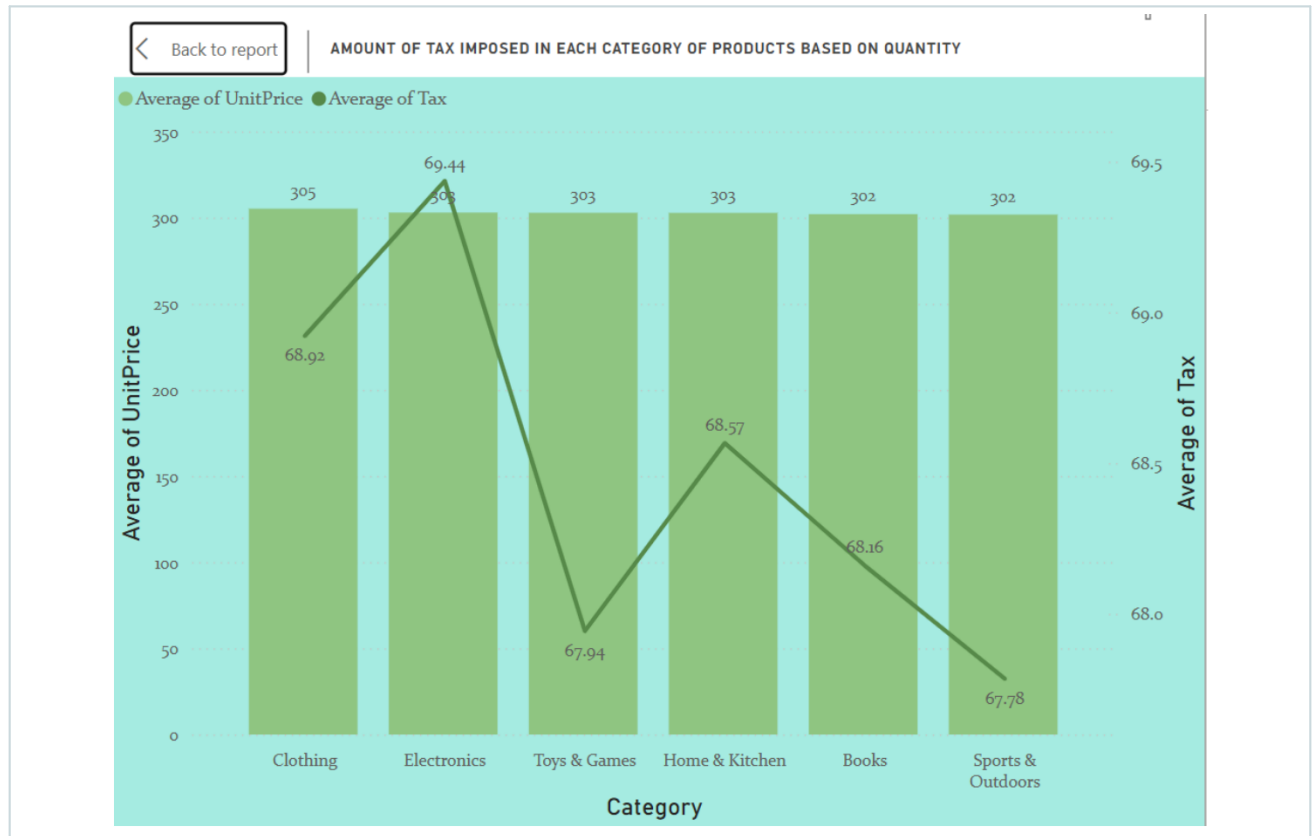

Chart type: Clustered column chart. Fields: Brand, ProductName, Total Revenue

Revenue from the top products (Webcam Full HD, Winter Jacket, Wireless Charger, Wireless Earbuds) is spread evenly across brands, mostly between Rs. 146K and Rs. 210K per brand and product.

Chart 3.4 Tax Imposed by Product Category, vs. Average Unit Price

Chart type: Column and line chart. Fields: Category, Average of UnitPrice, Average of Tax

Average tax moves with average unit price across categories. It peaks for Electronics (Rs. 69.44 tax on a Rs. 308 unit price) and is lowest for Toys & Games (Rs. 67.94 on Rs. 303).

Conclusion

In five years the business handled about 1,00,570 orders from 43,000 customers, for a net revenue of Rs. 84.23M and a total profit of Rs. 84.23M, with an average order value of Rs. 15.30M.

Brand and revenue overview: The United States drives most of the quantity sold and revenue, with CoreTech as the leading brand there. Shipping cost is nearly the same across all five countries, and no single brand is far ahead of the rest on total sales.

Overall business performance: An increase in quantity sold is the strongest driver of total profit, well ahead of tax or discount. CoreTech and KiddoFun lead on revenue share and average order value, and brand market share is split almost evenly, from 9.72% to 10.18%. Orders dipped in 2021, recovered through 2022-2023, and softened again in 2024.

Customers and operating costs: 73.72% of customers are in the United States and 17.92% in India. Credit card is the most used payment method at 35.04%. Tax tracks closely with unit price across categories, highest for Electronics and lowest for Toys & Games.
